EDUCATION

CUNY Brooklyn College

Bachelor of Science, Major in Computer Science

Expected May 2029

Incoming Freshman

CS50x: Introduction to Computer Science – Harvard/edX

Dec 2024

- Completed Harvard's introductory CS course covering algorithms, data structures, memory, and web development.
- Built hands-on projects using C, Python, SQL, and HTML/CSS, including a final web application.

EXPERIENCE

Priority Group Services

New York, NY

Program Manager Assistant

Jul 2025 – Present

- Created and edited technical proposals in response to RFPs and RFQs, contributing to structured, deadline-driven project workflows.
- Performed data-driven price sourcing and vendor analysis using Google Sheets to support cost-efficient bid development.
- Used project management tools such as Asana and Homebase to coordinate tasks and monitor team progress.
- Supported cross-functional communication through WhatsApp, email, and Grasshopper to streamline project collaboration.
- Conducted cold outreach and prospect research using Grasshopper, contributing to early-stage client engagement strategies.

Cava

New York, NY

Team Member

Apr 2025 – Present

- Selected to work at CAVA's NYC Learning Academy, a high-performance location used to train new managers and team leads.
- Demonstrated adaptability across multiple fast-paced roles including line service, grill, prep, and dishwashing.
- Consistently recognized by management for exceptional work ethic, curiosity, and high-quality customer service.
- Recommended for promotion to a managerial role within the first 3 months based on performance, leadership potential and initiative.
- Built strong relationships with managers and teammates, contributing to a positive and efficient store environment.

PROJECTS

Chess Web-App

Nov 2024 – Dec 2024

- Developed an interactive chess web application with full rules enforcement, including check, checkmate, stalemate, and legal move validation.
- Implemented real-time piece selection with visual highlights and move restrictions based on king safety and game rules.
- Built modular move logic and game state tracking to ensure accurate gameplay flow and turn handling.
- Designed a responsive, user-friendly interface using HTML, CSS and JavaScript.

SendToMac

May 2023 – Present

- Developed a cross-platform application enabling asynchronous transfer of text and URLs from iOS to macOS, even while the Mac is offline or at a distance. Messages are delivered upon next login, startup or at an interval.
- Implemented background macOS client using Python, AppKit, and rumps to display real-time alerts with user actions (Open, Snooze, Ignore).
- Prototyped iOS interface using SwiftUI with AI assistance to accelerate design and implementation. Enabled content transfer via REST API with responsive success/failure alerts.
- Integrated scheduling and expiration logic using timestamps to manage message flow and cleanup.
- Secured API communication by managing authentication keys and environment secrets using platform-appropriate secure storage practices.

SKILLS

Technical: Python, C, JavaScript, CSS/HTML, SQL, Supabase, Git

Spoken Languages: Portuguese (Fluent), Spanish (Basic)

Interests: Chess, Weightlifting, Swimming, Restaurants, Travel, AI, Movies, Gaming
